

**Amendments To the Abstract:**

In the English translation document, please add the section heading at page 9 line 1, as follows:

--Abstract--

Please add the paragraph in the English translation document at page 9 line 1, after the newly added Abstract, as follows:

The invention relates to a probe for electrical measurements and use of a flexible probe to produce an inflexible probe. Conventional probes comprise a substrate which is mechanically rigid. As a result only planar surfaces may be examined with the probe. According to the invention, a probe is flexibly embodied by means of a flexible substrate such that the probe may be adjusted to match various curvature radii of test bodies.
